

TRAXWISE

Plan ahead. Farm smarter.

FREEDOM TO FARM POWER TO GROW

Every season brings new challenges: unpredictable weather, tighter regulations, higher costs, soil compaction, and the pressure to get more out of every hectare. AgXeed was founded on the belief that farming can be different. With practical and proven autonomous solutions, we give farmers back the freedom to farm on their own terms.

The heart of autonomous farming:

TRAXWISE

We're here to give farmers more freedom and control by making autonomy practical and reliable. Our secret to making autonomous farming simple, efficient, and ready for today? TraXwise.

TraXwise the smart platform at the heart of every AgXeed solution. It connects pre-planning, monitoring, and data into one clear system, giving farmers grip on their work and peace of mind in every season. It's all about planning and control: you can easily pre-plan tasks across seasons and different fields, remotely monitor the progress live in the field with data and alerts, and store all results for full transparency. TraXwise links every AgBot, tractor, implement and operator in one smart system: plan your work once, from seeding to mowing, and it gets done precisely as you intended, every time.

TraXwise is scalable and compatible with any machine, making it easy to start small and expand step by step. Farmers can test it through a local dealer and experience the benefits of autonomy first-hand!

The key strengths of TraXwise:

Pre-planning
including pre-planning of implements

Live monitoring
realtime tracking and control

Data management
store, share, analyze

The complete autonomous cycle

From pre-planning in TraXwise to your field operations, AgXeed connects every step. Farmer, AgBots, tractors, and implements work together in one ecosystem. This is what freedom and control in farming looks like!

TRAXWISE

YOUR PATH TO SMARTER FARMING

Your five-step guide to freedom and control begins with pre-planning. By defining your fields and operational details before you start, you set the standard for consistency, reliability, and efficiency. From there, TraXwise connects the dots: pre-planning, flawless execution, live monitoring, and automatic documentation, all brought together in one intelligent platform.

1. SET UP YOUR FARM

Upload or create your fields, boundaries, and implements in TraXwise once, with support of your local dealer. Your farm becomes 'digital', ready to use season after season.

2. PRE-PLAN YOUR WORK (THE GAME CHANGER)

Define routing lines, headlands, speeds, depths, and operational details before you go to the field. This is where TraXwise truly sets itself apart: preparation ensures every task will be carried out exactly the way you intended.

3. SEND TO THE MACHINE/IMPLEMENT

Send the pre-planned task directly to an AgBot or a VCU-equipped tractor. Each task is defined for one field and one vehicle, but you can easily reuse the same settings to create new tasks for other fields, keeping your planning consistent across the entire farm.

4. EXECUTE WITH CONFIDENCE

The vehicle follows the plan precisely, while you monitor live progress on your phone, tablet, or PC. You stay in control, even when you're not in the field.

5. ANALYSE & IMPROVE

TraXwise automatically documents every operation, keeping all your data securely in one place. This gives farmers a clear overview and makes it easier to assess performance and identify opportunities for improvement.

AUTONOMY IS AT YOUR DOORSTEP

Starting with autonomy may sound complex, but it's surprisingly simple. Besides user-friendly and easy-in-use applications, you're also never on your own. AgXeed's local dealers and our expert team guide every farmer step-by-step ensuring that the right support is in place from the start. We've got your back!

Are you ready to:

- ✓ Farm on your own terms?
- ✓ Gain full control over every operation in the field?
- ✓ Protect your fields, reduce soil compaction, and use inputs more efficiently?
- ✓ Save time and reduce stress?
